# Using GypDri is easy

## Directions

Using GypDri is easy. First, spread the pellets across the entire spill so it covers the spill completely. Next, using a broom, press down on the pellets and sweep toward the center of the spill from all sides. Then pull pellets back over the spill and repeat until all of the liquid is absorbed. Finally, sweep up the used pellets and discard in the trash.

## First Aid

This product may be harmful if swallowed or may cause eye or skin irritation. If product comes into contact with eyes, wash eyes with water immediately after contact. Wash skin with soap and water after handling. Get medical attention if irritation persists. Keep out of open cuts and wounds. Avoid breathing dust.

GypDri is made from 100% recycled gypsum. Gypsum is a soft sulfate mineral composed of calcium sulfate dihydrate, and is mined around the world. It is used in multiple applications including fertilizer, construction material, in architectural and sculpture applications, as well as pharmaceutical and food additive uses.

## Use GypDri anywhere you have a spill
